

Enterprise privacy at OpenAI

Our commitments provide you with ownership and control over your business data (inputs and outputs from ChatGPT Business, ChatGPT Enterprise, ChatGPT for Healthcare, ChatGPT Edu, ChatGPT for Teachers and our API Platform) and support for your compliance needs.

The easiest way to get started with OpenAI is to deploy ChatGPT Business or ChatGPT Enterprise for your employees. It's simple to use and allows anyone in your organization to be productive with AI. If your engineering teams wish to build custom solutions using our technology, try our [API Platform\(opens in a new window\)](#)

By default, we do not use your business data for training our models. If you have explicitly opted in to share your data with us (for example, through our opt-in [feedback mechanisms\(opens in a new window\)](#)) to improve our services, then we may use the shared data to train our models.

Your end users or workspace members can build and share GPTs internally with each other within your workspace. The same commitments we provide for ChatGPT Enterprise, Business, Healthcare, Teachers, and Edu also apply to your use of GPTs within those workspaces. Note that if your workspace admins enable GPTs to be shareable with the public, any GPTs that your users choose to publish externally may be subject to additional review. External GPT sharing is not supported for ChatGPT for Healthcare. Learn more about [GPTs](#).

Apps enable ChatGPT to send and retrieve information from connected internal sources and third-party applications, including to help provide more context for its responses. Your workspace admins can control which apps are enabled for your workspace. ChatGPT respects your organization's existing permissions, and each end user is required to authenticate with a connected application before use. By default, we do not train our models on any data accessed from apps. Learn more about [apps\(opens in a new window\)](#).

As between you and OpenAI: you retain all rights to the inputs you provide to our services and you own any output you rightfully receive from our services to the extent permitted by law. We only receive rights in input and output necessary to provide you with our services, comply with applicable law, and enforce our policies.

OpenAI encrypts all data at rest (AES-256) and in transit between our customers

and us and between us and our service providers (TLS 1.2+), and uses strict access controls to limit who can access data. Our security team has an on-call rotation that has 24/7/365 coverage and is paged in case of any potential security incident. We offer a [Bug Bounty Program](#) for responsible disclosure of vulnerabilities discovered on our platform and products. Please visit our [Trust Portal\(opens in a new window\)](#) for more details.

Yes, we are able to execute a Data Processing Addendum (DPA) with customers for their use of ChatGPT Business, ChatGPT Enterprise, and the API in support of their compliance with GDPR and other privacy laws. Please complete our [DPA form\(opens in a new window\)](#) to execute a DPA with OpenAI. For ChatGPT Edu and for Teachers, we process your data pursuant to our [Student Data Privacy Agreement\(opens in a new window\)](#).

We may run any business data submitted to OpenAI's services through automated content classifiers and safety tools, including to better understand how our services are used. The classifications created are metadata about the business data but do not contain any of the business data itself. Business data is only subject to human review as described below on a service-by-service basis.

ChatGPT Enterprise, ChatGPT Edu, and ChatGPT for Healthcare FAQ

Built for businesses, ChatGPT Enterprise offers organizations the ability to use ChatGPT with controls, deployment tools, and speed required to make your entire organization more productive. Built for universities, ChatGPT Edu offers an easy way to deploy ChatGPT to students, faculty, researchers, and campus operations, while providing admins with the same controls as in ChatGPT Enterprise. ChatGPT for Healthcare is a secure workspace designed to support HIPAA compliance and built for healthcare organizations and their clinicians, administrators, and researchers. Learn more about [ChatGPT Enterprise](#), [ChatGPT Edu](#), and [ChatGPT for Healthcare](#).

Within your organization, end users can view their own conversations. Your organization has control over workspaces, and workspace admins can access an audit log of conversations and GPTs through the [Enterprise Compliance API\(opens in a new window\)](#). Authorized OpenAI employees will only ever access your conversations for the purposes of resolving incidents, recovering end user conversations with your explicit permission, or where required by applicable law.

They've each successfully completed a SOC 2 Type 2 audit. Read more in our [Trust Portal\(opens in a new window\)](#).

Your workspace admins control how long your data is retained. Any deleted conversations are removed from our systems within 30 days, unless we are legally required to retain them. Note that retention enables features like conversation history, and shorter retention periods may compromise product experience.

Built for small and growing businesses, ChatGPT Business offers collaborative tools and self-serve access to the power of ChatGPT in a dedicated workspace for your team. [Learn more about ChatGPT Business\(opens in a new window\)](#).

Within your organization, end users can view their own conversations. Workspace admins have control over workspaces and can view, access, export, and delete end user conversations in the workspace. Our access to conversations stored on our systems is limited to (1) authorized employees that require access for engineering support, investigating potential platform abuse, and legal compliance and (2) specialized third-party contractors who are bound by confidentiality and security obligations, solely to review for abuse and misuse.

ChatGPT Business successfully completed a SOC 2 Type 2 audit. Read more in our [Security Portal\(opens in a new window\)](#).

Your workspace admins can control how long your data is retained. Any deleted or unsaved conversations are removed from our systems within 30 days, unless longer retention is required by law, or is reasonably necessary to protect our services or any third party from harm. Note that retention enables features like conversation history, and shorter retention periods may compromise product experience.

ChatGPT for Teachers is a secure, self-serve workspace for U.S. K–12 educators, enabling teachers to use ChatGPT with classroom materials and student data, along with education-grade protections, admin controls, teacher-specific onboarding, and suggested prompts. It is available to verified teachers, staff, school leaders, and district administrators who work for an accredited U.S. K–12 school or district.

Our access to conversations stored on our systems is limited to (1) authorized employees that require access for engineering support, investigating potential platform abuse, and legal compliance and (2) specialized third-party contractors who are bound by confidentiality and security obligations, solely to review for abuse and misuse.

As with our Enterprise, Business, and Edu offerings, information shared with ChatGPT for Teachers is not used to train our models by default.

Infrastructure supporting ChatGPT for Teachers is adherent to industry best practices for security & privacy. Read more in our [Security Portal\(opens in a new window\)](#).

Each of your workspace members control whether their conversations are retained. Any deleted conversations are removed from our systems within 30 days, unless we are legally required to retain them. Note that retention enables features like conversation history, and shorter retention periods may compromise product experience.

The OpenAI API Platform gives developers access to powerful models like our GPT-5 models. You can create various applications and services, including fine-tuning models for specific tasks. Find more information in our [Platform Docs\(opens in a new window\)](#).

Our API Platform has been audited and certified for SOC 2 Type 2 compliance. Read more in our [Trust Portal\(opens in a new window\)](#).

We are able to sign Business Associate Agreements (BAA) in support of customers' compliance with the Health Insurance Portability and Accountability Act (HIPAA). Please [reach out\(opens in a new window\)](#) if you require a BAA.

Yes, you can adapt certain models to specific tasks by fine-tuning them with your own prompt-completion pairs. Your fine-tuned models are for your use alone and never served to or shared with other customers or used to train other models. Data submitted to fine-tune a model is retained until the customer deletes the files.

Except for certain endpoints and features listed in our [platform documentation\(opens in a new window\)](#), OpenAI may securely retain API inputs and outputs for up to 30 days to provide the services and to identify abuse. After 30 days, API inputs and outputs are removed from our systems, unless we are legally required to retain them. You can also request zero data retention (ZDR) for eligible endpoints if you have a qualifying use-case. For details on data handling, visit our [Platform Docs\(opens in a new window\)](#) page.

Our access to API business data stored on our systems is limited to (1) authorized employees that require access for engineering support, investigating potential platform abuse, and legal compliance and (2) specialized third-party contractors who are bound by confidentiality and security obligations, solely to review for abuse and misuse.

OpenAI trains its models in two stages. First, we learn from a large amount of

data. Then, we use data from ChatGPT users and human trainers to make sure the outputs are safe and accurate and to improve their general capabilities. Learn more about our [training process\(opens in a new window\)](#).

OpenAI uses data from different places including public sources, licensed third-party data, and information created by human reviewers. We also use data from versions of ChatGPT and other services for individuals. By default, data from ChatGPT Business, ChatGPT Enterprise, ChatGPT for Healthcare, ChatGPT Edu, ChatGPT for Teachers, and the API Platform (after March 1, 2023) isn't used for training our models, unless you have explicitly opted in to share your data with us to improve the services.
